## Environment policy

Infinis is a renewable energy business and the UK's leading generator of low carbon power from captured methane. It is one of the few companies in the UK already delivering a positive impact on climate change through the capture of greenhouse gas and use of that resource to generate low carbon electricity.

Infinis is committed to achieving high standards of environmental performance in all aspects of its business. Our aim is to achieve success by optimising our resources, enabling us to grow a diversified energy portfolio, creating long term value and a sustainable future. Our baseload activities of managing and utilising captured landfill methane and captured mineral methane, helps tackle climate change and Infinis is committed to minimising any negative impacts of its operations. Compliance with environmental legislation and other relevant duties is a minimum requirement and an integral part of this environmental policy. To support and enforce this policy Infinis is committed to:

- encouraging continuous improvement in environmental performance and management systems through measurable objectives and targets
- continuing to develop and maintain activities which protect and enhance the environment and support the transition to a low carbon energy economy
- developing, implementing and reviewing systems to prevent pollution
- endeavouring to replace the use of non-sustainable natural resources
- identifying environmental risks and ensuring all practicable measures are in place to reduce the risk
- demonstrating commitment to the education and development of its staff in relation to environmental matters
- working with suppliers to minimise the impact of their operations on the environment
- engaging with stakeholders, including publishing this policy and information on its environmental performance
- monitoring its performance against environmental targets and audits compliance against policies and procedures
- complying with and where appropriate improving on the requirements of BS ISO 14001 and all legislative controls

The ultimate accountability for Infinis' environmental performance lies with the Infinis Board who ensures that it is given and retains the highest of priorities.

The Chief Executive Officer has ultimate day to day responsibility for the implementation of this policy and delegates line management responsibility requiring commitment from all employees, consultants and contractors. Specific arrangements and organisational responsibilities are detailed in the HSQE Policy Arrangements as updated with the approval of the Chief Executive Officer from time to time. Adherence to this policy and associated procedures is a condition of employment for staff of Infinis (including its subsidiaries) and a condition of engagement for consultants and contractors.

The Board reviews this policy at least annually and updates it as required, monitoring its implementation on an ongoing basis.
